

Rhino fun facts

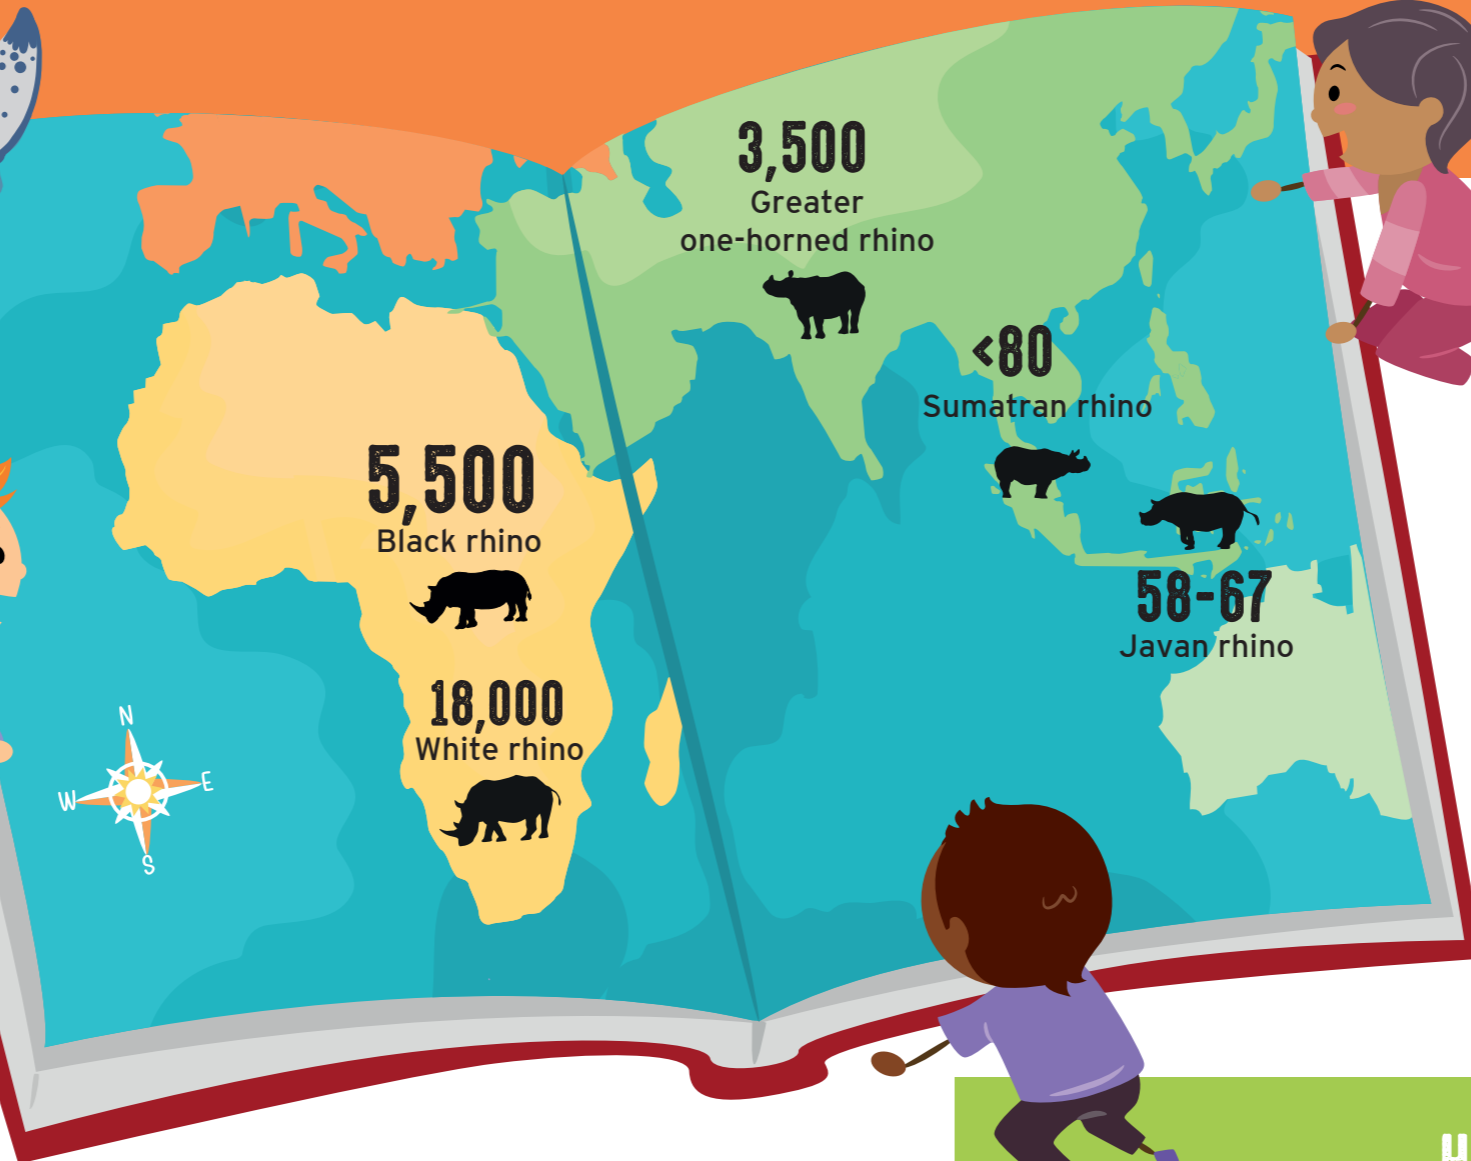

How many rhino species exist?

5 rhinos

2 species in Africa:
white rhino,
black rhino

3 species in Asia:
Javan rhino,
Sumatran rhino,
Greater one-horned rhino

What food do they eat?

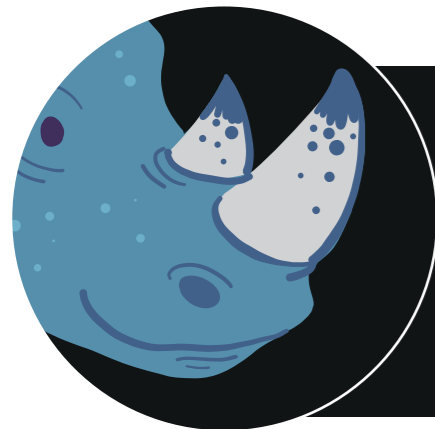

- Rhinos are herbivores!
- This means they only eat plants
- Some rhinos eat more than 180 different plant species

How much do rhinos weigh?

- Rhinos are big animals, weighing as much as 2,500 kg. That's more than a car!

Why do rhinos have horns?

- Rhinos can use their horns to protect themselves and their calves' from predators like lions
- Some rhino species, like black rhinos, also use their horns to help find the best leaves to eat

How fast can they run?

- Rhinos are speed machines - they can reach up to 55 km per hour

Why are rhinos endangered?

- Rhinos are poached (killed illegally) for their horns, which are prized in South East Asia
- They are threatened by habitat loss and need more space to live

How can you help rhinos?

Walk, bake, cycle, sing! Ask your friends to sponsor an activity to raise money for rhinos.
